***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 13-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Bosloy (US 6,714,544).

Regarding claim 13, Bosloy teaches a transport network to provide a communications link (fig. 1 box 12, col. 2 lines 53-55).

Bosloy teaches a control network (fig. 1 box 18) to control the setting up and/or clearing of the communications link (fig. 1 box 18, col. 2 lines 58-64), the control network having a first device to control the setting up and/or clearing of connections in the transport network via the control network, the device being arranged physically separately from the transport network (col. 2 lines 58-64).

Art Unit: 2616

Bosloy teaches the transport network has at least two decentralized switching devices (fig. 1 boxes 34, 36, 38) to provide a communications link in the transport network, with at least one permanent communications link via the transport network between the decentralized switching devices (fig. 1: see links connected to box 36, col. 4 lines 21-23).

Regarding claim 14, the communications link is in the form of permanent virtual connections (fig. 1: see links connected to box 36, col. 4 lines 21-23).

Regarding claims 15, 17, the transport network is in the form of an ATM network (fig. 1 box 12, col. 2 lines 53-55).

Regarding claims 16, 18, and 19, there are communications links between the decentralized switching devices (fig. 1: see links between switches 34, 36, 38).

### ***Response to Arguments***
